Date: October 19, 2026

APPLICATION: Senior Lead Full-Stack Engineer & Head of Technology (Job ID: 4477701018)

Dear Kutuma Recruitment Team,

I am writing to express my strong interest in the **Senior Lead Full-Stack Engineer & Head of Technology** role at Kutuma Kenya Limited. As a technical player-coach currently serving as Head of Technology at Powerpay Africa with an academic background in Electronics & Computer Engineering (JKUAT) and an ongoing M.Sc. in Computer Science (Zetech University), I bridge executive technology strategy with deep, hands-on software engineering.

Multi-Market Technical Project Execution & Architecture:

To address your specific requirement, at Powerpay Africa I architected and currently lead the rollout of our **Multi-Region Smart Energy Telemetry & Asset Financing Platform** across Kenya and regional operating hubs. The project required engineering a unified platform capable of ingesting high-frequency telemetry from thousands of distributed IoT edge controllers while supporting regional cellular networks, currency gateways, and differing localized business models:

- **Core Backend & Concurrency:** Engineered production-grade Python/Django REST microservices and async pipelines utilizing Celery and Redis. Scaled multi-tenant database architectures across PostgreSQL and ClickHouse/InfluxDB for ultra-low-latency analytics, sustaining 99.9% uptime across municipal and commercial customer deployments.
- **Real-Time Web & Frontend:** Built bi-directional event systems and operational control dashboards leveraging Django Channels/WebSockets, modern JavaScript/React, and Flutter/Flet for field diagnostics. Integrated automated Node-RED exception handling that eliminated manual dispatch interventions across field operations.
- **AI & Data Pipeline Oversight:** Developed a non-intrusive load monitoring solution using AI by building data pipelines, training APIs and defining necessary data structures.
- **DevOps, Security & Compliance:** Orchestrated containerized deployment workflows using Docker on Ubuntu AWS/Azure environments, implementing automated CI/CD pipelines, robust unit/integration testing, strict secret management, and data privacy adherence for sensitive customer and transaction records.

Engineering Leadership & Team Growth:

As a leader, I manage cross-functional software and hardware engineers through structured agile sprints, pragmatic code reviews, and clear career progression tracks. I collaborate directly with executive stakeholders, operations leads, and client partners to translate ambitious business targets into crisp engineering roadmaps, minimizing technical debt while ensuring timely delivery within tight capital allocations.

Kutuma's rapid expansion across African logistics demands technical rigor, operational empathy, and an anchor engineer who thrives in both the codebase and the boardroom. I welcome the opportunity to discuss how my hands-on full-stack mastery, AI integration capabilities, and proven technology leadership will drive Kutuma's next chapter of market leadership. You can inspect my live builds, repositories, and interactive portfolio at **jefftarimo.co.ke** and **github.com/Tarimo077**.

Sincerely,
Jeff Tarimo
