APPLICATION: Senior AI & Full-Stack Engineer - DevOps & Technical Leadership

Dear Hiring Team,

I am writing to express my enthusiastic interest in the **Senior AI & Full-Stack Engineer (DevOps & Technical Leadership)** role at M365Consult. As a hands-on technical player-coach currently serving as Head of Technology at Powerpay Africa, I combine senior full-stack development (Python/Django, Node.js, React) with practical AI/agentic integration, Linux/Docker DevOps, and distributed team leadership. Your emphasis on agile startup execution, human-reviewed AI agent workflows, and ownership across both internal and outsourced contributors closely matches my day-to-day operating model.

Key Qualifications & Application Overview:

- **Full-Stack Delivery:** Architected and shipped multi-tier production platforms, including an enterprise SaaS platform (Django, PostgreSQL, HTMX/React, REST APIs) and real-time operational portals. I independently handle backend business logic, database migrations, caching layers (Redis), and responsive frontend interfaces.
- **AI & Agentic Workflows:** Designed non-intrusive load monitoring (NILM) and anomaly detection pipelines using AI models, structured training APIs, and telemetry data. I leverage AI coding assistants and autonomous agents daily to accelerate velocity, always enforcing rigorous unit/integration test suites, syntax validation, and human code reviews.
- **Linux, Docker & Cloud DevOps:** Direct end-to-end infrastructure management across Ubuntu Linux, AWS, and Azure. Proficient in Docker containerization, multi-stage builds, reverse proxies (Nginx/TLS), DNS routing, and automated CI/CD pipelines via GitHub Actions with automated rollback procedures and 99.9% telemetry uptime.
- **Leadership, Mentoring & Outsourced Delivery:** Led cross-functional teams of software and hardware engineers, establishing PR review standards, architectural guardrails, and mentoring paths that elevated mid/junior contributors. Experienced coordinating external contractors, translating ambiguous business goals into verifiable acceptance criteria, and vetting deliverables for security and long-term maintainability.

Availability & Working Alignment:
I am fully available to start **immediately** (or within 2 weeks of agreement) in a full-time, 100% remote capacity. I am entirely comfortable with startup-aligned tracking setups, milestone deliverables, and transparent time-tracking tools. My starting compensation expectations are **$2,500 – $3,500 / month (or equivalent in KES / agreed currency)**, structured with milestone-based progression as company initiatives grow and deliver impact.

I invite you to review my live builds, repositories, and technical portfolio at **jefftarimo.co.ke** and **github.com/Tarimo077**. I look forward to discussing how my full-stack capabilities, pragmatic AI implementation, and startup technical leadership can accelerate M365Consult's engineering vision.

Sincerely,
Jeff Tarimo
